DC charging time SOC 30%-80%	26min	26min

5. Power consumption is calculated in accordance with Regulation (EU)2017-1151.

6. The WLTP range and consumption values are obtained under standard EU test conditions, according to the uniform provisions concerning the approval of motor vehicles with regard to the emissions based on the new World Harmonized Light Vehicle Test Procedure (WLTP). The actual range and energy consumption figures may vary due to a number of factors such as weather conditions, traffic situation, vehicle load and driving behaviours.

7. Charging times and charging speed may vary due to different factors such as battery temperature, specs of charging infrastructure, state of charge. A CCS2 DC charger with the output higher than 150kW and the voltage higher than 650V, as well as the suitable ambient temperature (25°C) are required to achieve the maximum charging speed.
